

ANINDYA SUNDAR NANDI

Master's Student in Computer Science

📞 (+91) 6296689986 ✉ anindyanandi.work@gmail.com 🔗 [LinkedIn](#) 🔗 [GitHub](#)

SUMMARY

I am a Master's student in Computer Science with a solid academic background in Mathematics. My academic performance includes GPA of 8.79 for my postgraduate studies and 8.90 for my undergraduate degree. I am proficient in Python and SQL along with JavaScript, with extensive experience in machine learning workflows including model development, evaluation, and deployment. I excel in using tools like PyTorch, Scikit-learn, Git, GitHub and Docker and many more have a passion for exploring machine learning and AI development opportunities

EDUCATION

Master of Science in Computer Science (M.Sc.)

[Vidyasagar University](#)

📅 09/2023 - 07/2025 📍 Medinipur, India

Bachelor of Science (Honors)- Mathematics

[Vivekandanda Satavarshiki Mahavidyalaya](#)

📅 07/2019 - 08/2022 📍 Manikpara, India

SKILLS

Python	SQL	JavaScript	PyTorch	NumPy	Pandas	Scikit-learn	NLP	Matplotlib
Streamlit	FastAPI	Git	GitHub	Airflow	MLflow	Docker	MLOps	DVC
LangChain								

PROJECTS

Football Game Analysis

Analysis of football games using machine learning techniques

- Utilized YOLOv5 for real-time detection of players and ball in football matches
- Designed a color-based clustering system using K-Means to automatically group players by team
- Integrated a ball tracking system to analyze ball control, possession, and movement dynamics
- Employed Python, OpenCV, and machine learning for data processing, visualization, and result generation

Plant Leaf Disease Recognition

Classification of plant leaf diseases using deep learning

- Developed a deep learning-based crop disease classification system using transfer learning with EfficientNet-B4 achieving 98.17% accuracy
- Employed Python, PyTorch, and ML techniques for model development, evaluation, and visualization
- Conducted performance comparison and analysis of different pre-trained models to select the best-performing architecture

AI Web Scraper

A web scraping tool that automates data extraction and analysis

- Built a web scraper using Python, Selenium, and BeautifulSoup to extract data from dynamic websites
- Integrated LangChain to automate LLM-based parsing, summarization, and custom analysis
- Enabled command-driven interactions where the LLM analyzed scraped data in real time
- Automated an end-to-end workflow covering data extraction, cleaning, storage, and intelligent processing
