

ANINDYA SUNDAR NANDI

Data Science | Machine Learning | Computer Vision Engineer

(+91) 6296689986 • anindyanandi.work@gmail.com • Kolkata, India
• Portfolio • LinkedIn • GitHub

PROFESSIONAL SUMMARY

Master's student in Computer Science with a strong academic background in Mathematics (8.79 & 8.90 CGPA). Practical experience building machine learning, computer vision, and data-driven projects using Python, PyTorch, Scikit-learn, and SQL. Familiar with end-to-end workflows from model evaluation to containerization with Docker. Eager to contribute to applied ML and data engineering roles.

EDUCATION

Master of Science (M.Sc.) in Computer Science <i>Vidyasagar University</i> CGPA: 8.79/10	09/2023 – 07/2025 <i>Medinipur, India</i>
Bachelor of Science (B.Sc. Honors) in Mathematics <i>Vivekananda Satavarshiki Mahavidyalaya</i> CGPA: 8.90/10	07/2019 – 08/2022 <i>Manikpara, India</i>

TECHNICAL SKILLS

Languages & Core:	Python, SQL, JavaScript, Bash
ML Frameworks:	PyTorch, Scikit-learn, OpenCV, XGBoost
NLP & Gen AI:	LangChain, OpenAI API, RAG Architecture
Data Engineering:	Pandas, NumPy, Snowflake, dbt Core
MLOps & Deployment:	Git, GitHub, Docker, FastAPI, Streamlit, MLflow, Airflow, AWS

PROJECTS

Plant Leaf Disease Recognition <i>Python, PyTorch, EfficientNet-B4, timm, Scikit-learn</i>	GitHub 2025
- Engineered an agricultural deep learning diagnostics system utilizing transfer learning with EfficientNet-B4 (timm) on 9,000+ grapevine leaf images to classify 4 conditions (Black Rot, Esca, Leaf Blight, Healthy). - Achieved 98.17% test accuracy and a 0.98 macro F1-score across 1,805 held-out test images using stratified dataset sampling and custom classification head fine-tuning. - Implemented comprehensive data augmentation pipelines (ColorJitter, RandomRotation, CenterCrop, Normalization) and evaluated performance via confusion matrices and classification reports.	
Football Match Vision & Analytics <i>Python, YOLOv5, OpenCV, K-Means</i>	GitHub 2025
- Built a real-time computer vision system using custom YOLOv5 models for multi-class detection of players, referees, and the ball from high-definition broadcast video feeds. - Designed an automated HSV color-space K-Means clustering algorithm to extract jersey color signatures and group squad players with 96.5% classification accuracy. - Integrated optical ball tracking to compute dynamic possession percentages, passing lanes, and spatial team heatmaps at an inference throughput of 32 FPS.	
Autonomous AI Web Scraper <i>Python, LangChain, OpenAI API, Selenium, Pandas</i>	GitHub 2025
- Architected an end-to-end data extraction engine with headless Selenium and BeautifulSoup to dynamically scrape and parse complex JavaScript-rendered single-page applications (SPAs). - Integrated LangChain reasoning agents with OpenAI LLMs to autonomously transform unstructured DOM trees into strictly validated, typed JSON schemas with 99.1% extraction accuracy. - Enabled natural language querying over extracted content, reducing manual document review and ad-hoc data synthesis time by over 80%.	
Zomato Enterprise Data Platform <i>Python, SQL, Snowflake, dbt Core, Airflow</i>	GitHub 2026
- Modeled an enterprise modern data platform on Snowflake ingesting and processing 35M+ transaction records across normalized staging layers, dimensional star schemas, and analytical marts. - Orchestrated modular dbt transformations with automated data freshness/integrity tests and scheduled batch updates via Apache Airflow DAGs. - Built an interactive Text-to-SQL Streamlit analytics portal powered by LLMs for natural language business intelligence queries.	

ACHIEVEMENTS

- Problem Solving:** Solved **150+** algorithmic challenges on LeetCode covering array, linked list and dynamic programming.
